INVESTMENT OBJECTIVE AND STRATEGY

The Fund is a peso denominated money market Unit Investment Trust Fund that aims to provide its participants with enhanced yields for the short-term liquidity needs by investing in a diversified portfolio of short-term, highly liquid fixed-income securities, term deposits and other money market instruments. The Fund aims to surpass the prevailing savings account rate (gross of fees). **The target benchmark is based on Savings Account Rate.**

CLIENT SUITABILITY

A client profiling process should be performed prior to participating in the Fund to guide the prospective investor if the Fund is suited to his/her investment objectives and risk tolerance. Clients are advised to read the Declaration of Trust/Plan Rules of the Fund, which may be obtained from the Trustee, before deciding to invest.

The CTBC Money Market Fund is suitable only for investors who:

- Have a conservative, moderate, or aggressive risk appetite.
- Can accept slightly higher returns than traditional deposits so long as the funds are safe.
- Have a short term investment horizon, ranging from one to three years.
- Are looking for a pooled fund invested in a mix of short term time deposits, treasury bills and bonds, and some corporate bonds. This is a conservative risk product.

KEY RISKS AND RISK MANAGEMENT

You should not invest in this Fund if you do not understand or are not comfortable with the accompanying risks.

Market Risk - This is the possibility for an investor to experience losses due to changes in the market prices of securities.

Interest Rate Risk - This is the possibility for an investor to experience losses due to changes in interest rates. The purchase and sale of a debt instrument may result in profit or loss because the value of a debt instrument changes inversely with prevailing interest rates.

Default Risk - This is the possibility for an investor to experience losses due to a borrower's failure to pay principal and/or interest in a timely manner on instruments such as bonds.

The Fund employs a risk management policy based on duration. Duration measures the sensitivity of NAVPU to interest rate movements. As interest rates rise, bond prices fall. The higher the duration, the more the NAVPU will fluctuate in relation to changes in interest rates. The Fund may avail financial derivative instruments solely for the purpose of hedging risk exposures.

OUTLOOK AND STRATEGY

Money market yields trended lower toward year-end as monetary conditions continued to ease. The CTBC Bank (Philippines) Corp. Money Market Fund gained 0.29% in December M/M, closing 2025 with a 3.65% YTD return, supported by five BSP policy rate cuts that brought the overnight rate to 4.50%. Treasury bill yields declined by around 100 bps YTD, while the final BSP bill auction for the 28-day tenor cleared at 5.11%, down 94 basis points from the start of the year.

Reduced supply of short-dated instruments and falling BSP bill yields led to a broad moderation in time deposit rates across the banking system.
